

RIVER RESTORATION

This section of the Wandle has been recently restored by The Wandle Trust

Urban rivers such as the Wandle have **been heavily modified** over the years for **industry and development**. The **Wandle Trust** has been working hard to **restore** this stretch of the Wandle for **wildlife and the local community**.

Did you know? The Wandle was considered ecologically dead only 55 years ago!

What have we done?

A **new bank line** was created with a more **natural meandering** shape.

The **modified channel** will help the **river** be **more resilient** to future **drought**.

Gravels and aquatic vegetation have been added with the **help** of **local volunteers** to create **new habitats** for **wildlife**.

FIND OUT MORE: W: www.wandletrust.org E: information@wandletrust.org

This work has been **supported by Defra's Catchment Restoration Fund**, the **Environment Agency** and the **Living Wandle Landscape Partnership**.
